

I support the comments filed by ARRL. Although, I am not fully aware of all of the minutae of BPL, I am aware of the effects of sustained RF radiation exposure. There are several studies that show the BPL will create an undue amount of RF in our living in working environments. Moreover, the loss of HF bands due to interference caused by a technology that is developing, makes no sense when there is technology that accomplishes the same task with greater availability and with, no HF interference.

Sincerely,

Robert B. Scaife
